Languages

Dutch – great.
English – excellent.

Knowledge

I have an extensive knowledge of both **HTML5** and **JavaScript** as well as **CSS3**. I am a **developer** and not a designer so I prefer bootstrap for my personal projects. When a design is delivered I prefer pure HTML5 and CSS3. I use **jQuery** but I am more experienced with pure JavaScript. I really like making web applications using the **MEAN** stack, apart from **MySQL** and **PHP** I am experienced with **MongoDB**, **ExpressJS**, **AngularJS** for front-end, and **Node** for back-end. I have developed and expanded existing **Java** applications with the use of creating **UML** diagrams. The project based applications developed during semesters were achieved by using elements of **Scrum** and **Kanban**. I dual boot **Windows** 8.1 and Arch **Linux**, as well as administrating an Ubuntu dedicated server.
